INTERVIEW WITH THE PORTFOLIO MANAGER

PIERGAETANO IACCARINO

- Head of Equity Solutions, Amundi
- Headquarter: Dublin
- More than 20 years of experience in the asset management industry

1. WHAT MAKES THIS FUND UNIQUE?

- Unique concept focused on CO₂ reduction in Developed Markets equities to facilitate the transition to a Net-Zero⁷ world.
- An active, fundamental, bottom-up approach⁸ to stock selection within a disciplined framework.
- The Fund mainly invests in a broad range of equities and equity-linked instruments of companies from anywhere in the world which contribute to climate change mitigation by supporting the transition of the global economy through a trajectory of reduction of their carbon emissions.

2. HOW DO YOU BUILD THE PORTFOLIO?

- We believe Net Zero targets should be achieved with a fundamental, bottom-up framework to increase likelihood of success.
- A careful fundamental analysis is essential to assess the financial and carbon reduction objectives of each company.

3. HOW DOES THE SELECTION PROCESS WORK?

- As we assess both “how” the company operates and “what” the company produces, we diversify across three different types of companies. The Climate Champions – the companies that are already very advanced in their CO₂ mitigation, The Climate Committed – the companies taking the right steps to achieve their goals, and finally The Climate Enablers – the companies that are producing the innovative technologies or products or services that facilitate the path towards a low carbon world.
- The blend of these three different business models results in a well-diversified, balanced portfolio, with no strong style biases.

4. HOW IS THE INVESTMENT PROCESS?

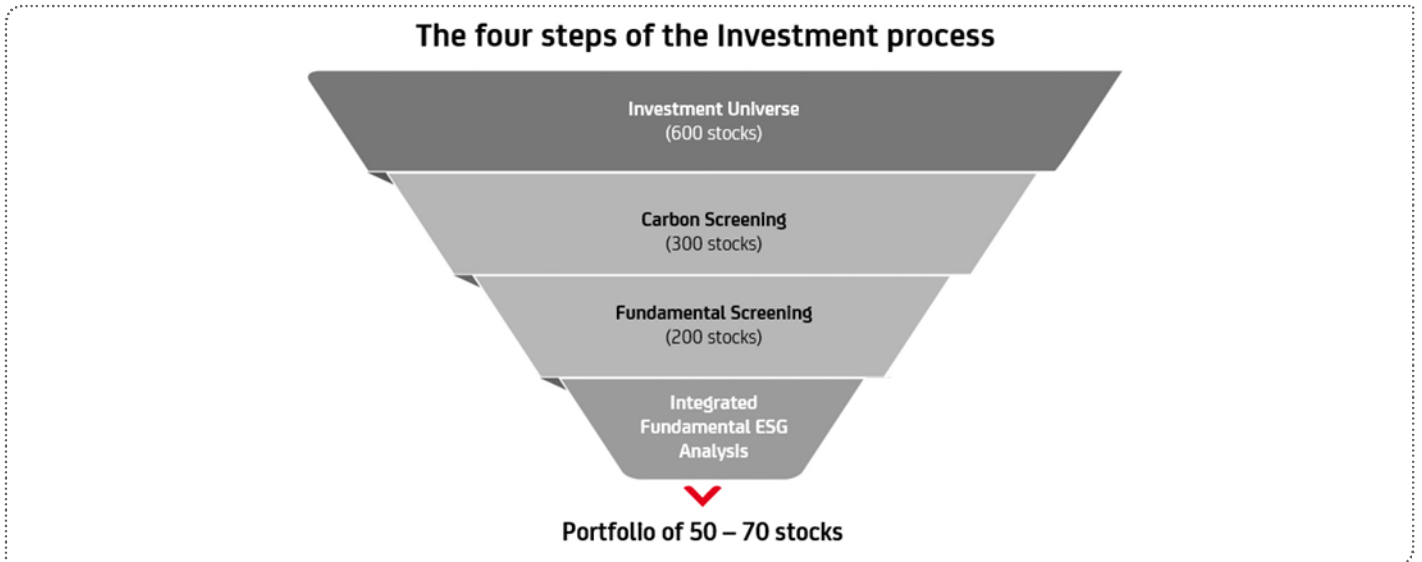

- A concentrated, active portfolio based on robust fundamental analysis that aims to realise the net zero target path of the MSCI World Climate Paris Aligned Benchmark (PAB).
- The Funds invests exclusively in companies with realistic CO₂ targets that are achievable with today's technology. The portfolio manager favours companies that have included CO₂ reduction targets in their management remuneration plan.

⁷The term ‘Net Zero’ refers to the balance between the amount of greenhouse gases released into the atmosphere and the amount of greenhouse gases removed. The United Nations defines ‘Net Zero’ as ‘reducing greenhouse gas emissions as close to zero as possible, with the remaining emissions being removed from the atmosphere, oceans and forests. In addition to reducing emissions of carbon dioxide (one of the greenhouse gases), Net Zero can also be achieved by offsetting carbon emissions.

⁸Bottom-up investing is an investment approach that focuses on analysing individual stocks and de-emphasises the significance of macroeconomic and market cycles. Bottom-up investors focus on a specific company and its fundamentals, whereas top-down investors focus on the industry and economy.

PROFILE OF POTENTIAL INVESTORS

- An investment in this Fund is thought for investors who are able to appraise the risks and economic value of the investment.
- The investor must be prepared to accept a significant volatility and potentially substantial capital losses in order to achieve higher returns.
- The Fund is intended for investors with a medium to long-term investment horizon.

IMPORTANT INFORMATION

CHANCES

- Hedging a position is usually done to protect or insure against the adverse price movement risk of an asset.
- Emerging Markets offer the potential for competitive returns over the long term, across a variety of countries and industries, and represent an important diversifier for investors.
- The fund offers the possibility to participate to equity market growth in the long-term horizon.
- Active management is an approach to investing. In an actively managed portfolio of investments, the portfolio manager selects the investments that make up the portfolio. Active management has benefits, such as the ability to adjust to market conditions, and the opportunity for diversification.
- Companies that lead in terms of sustainable operations and activities might benefit from structural drivers such as legislative and regulatory actions aimed at solving sustainability challenges, and an increase in demand along more sustainable consumption patterns.

RISKS

- To the extent that the Sub-Fund invests a large portion of its assets in a limited number of industries, sectors, or issuers, or within a limited geographical area, it can be riskier than a fund that invests more broadly.
- The Fund may invest in instruments, such as derivatives, that might not fulfill their obligations in the future, exposing the relevant sub-funds to financial losses in the process.
- Emerging markets are less established than developed markets and therefore involve higher risks, particularly market, liquidity, currency risks and interest rate risks, and the risk of higher volatility.
- The prices of the equity may fluctuate significantly as they depend on general economic and political circumstances.
- If the Sub-Fund invests in other UCITS / UCIs, it may incur a second layer of investment fees, which will further erode any investment gains.
- There is a risk that agreements, securities lending, repurchase agreements and derivatives techniques are terminated due, for instance, to bankruptcy. A sub-fund may be required to cover any losses incurred.
- In periods of market instability, the Fund may be required to realize assets at a price that does not reflect their intrinsic value.
- The integration in the investment process of ESG and sustainability factors with wider monitoring and engagement activities, may have an impact on the value of investments and, therefore, on returns.
